# Final Reflection

Making this project wasn't easy. As someone who did not have prior in Azure services, it was hard for me to navigate through the portal and follow the instructions. **One of the main issues that I experienced is when I am making my project in the form recognizer model.** The project couldn't be made due to the blob storage and the following error is displayed in the portal:

Please check if you have unexpired read/write/list/delete permission to blob container/blob.
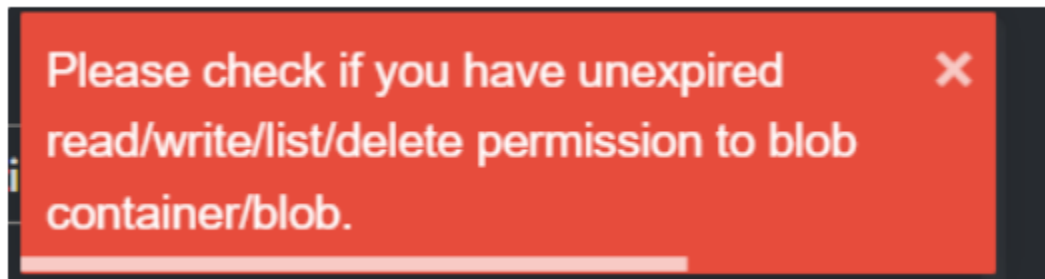

I tried reading about different solutions and it suggested the following: enabling CORS from the connection and making sure that I have the needed privileges in the resource. I still couldn't make it work and after several tries, I realized that my error is that I am assigning the privileges to the wrong account.

Another major problem I encountered is that I couldn't create a resource using the account provided by Udacity. Whenever I try to make a resource such as form recognizer or custom vision, I get the following error:

```
Resource 'form-recognizer-raven' was disallowed by policy. (Code:
RequestDisallowedByPolicy)

   Policy: cloud-demo388-PolicyDefinition
```

I emailed the Udacity team and even asked helped from the tutors but it still doesn't work. As a solution, I used my personal account to be able to use the Azure resources needed for the project.
